Summary

Computer Engineering student at Telkom University Bandung with DevOps and software engineering experience in cloud infrastructure, containerization, and web development. Hands-on with **Kubernetes, Docker, Terraform, CI/CD, AWS, and Google Cloud Platform**, and programs in **C++, Python, Go, JavaScript, and TypeScript**. Background in embedded systems and hardware research, and mentor to 100+ students in programming and web development.

Education

Telkom University Bandung, BS in Computer Engineering Sep 2024 – 2028
GPA: 3.13/4.00, Expected Graduation: 2028

Certifications

RCNA Routing and Switching, Ruijie Networks (Nov 2025)
NVIDIA Deep Learning Fundamentals, NVIDIA Deep Learning Institute (Oct 2025)

Experience

Coordinator Assistant, SEA Laboratory, Telkom University May 2026 – Present

- Coordinate daily operations and resource allocation for the SEA Laboratory, supporting teaching and research activities
- Support research project planning, execution, and documentation with researchers and students, and organize laboratory workshops and seminars

Research Assistant, SEA Laboratory, Telkom University Dec 2025 – May 2026

- Taught a Python programming study group of 40+ students, covering data structures, algorithms, and object-oriented programming (OOP)
- Mentored students through hands-on coding projects and led workshops and peer study sessions

Co-Head of Mentor and Curriculum, Google Developer Groups on Campus (GDGoC) Oct 2025 – Present

- Co-lead mentoring and curriculum programs, collaborating with cross-functional teams on developer engagement and community building
- Organize and lead technical workshops, hackathons, and events for university students
- Develop and maintain online learning resources and technical documentation

Research Collaborator, Telkom University Bandung Feb 2025 – Present

- Developed body-tracking instrumentation for fall detection dataset collection, implementing sensor integration and data acquisition for machine learning research
- Calibrated Inertial Measurement Unit (IMU) sensors using ellipsoidal fitting algorithms for research-grade motion data
- Designed and fabricated custom PCBs for wearable form factors, optimizing hardware integration and miniaturization
- Led a cross-functional hardware development team, delivering research instrumentation within project timelines

Website Development Mentor and Curriculum, GDGoC Telkom University Nov 2024 – Oct 2025

- Designed a web development curriculum covering HTML, CSS, JavaScript, React.js, and Node.js for university students
- Mentored 100+ students in web development fundamentals, best practices, and hands-on project implementation
- Guided students in building responsive websites, full-stack web applications, and portfolio sites

Software Engineer (Freelance), Nusantara Wing Lab, Indonesia Mar 2023 – Present

- Architect and evaluate technology stacks for web applications, balancing performance, scalability, and maintainability
- Deploy, manage, and scale web applications and databases, monitoring resource utilization and performance metrics
- Lead technology stack migrations to modern frameworks while minimizing downtime and preserving data integrity

DevOps Engineer (Remote), tako.id – PT. Rumah Kreasi Bersama, Indonesia Dec 2023 – Jul 2024

- Mitigated large-scale DDoS attacks totaling 64M+ requests using Cloudflare, maintaining service availability
- Deployed and orchestrated containerized applications across multiple Kubernetes clusters for high availability and scalability
- Managed and monitored production Kubernetes environments, optimizing cluster resource allocation
- Designed and implemented CI/CD pipelines to automate deployments and reduce deployment time
- Wrote Terraform configurations to adopt Infrastructure as Code (IaC) for consistent, reproducible infrastructure
- Diagnosed and resolved critical infrastructure incidents through proactive monitoring and rapid incident response
- Contributed to infrastructure planning and stack migration decisions

Technical Skills

Languages: C++, C, Python, Go (Golang), Rust, JavaScript, TypeScript, HTML, CSS
Cloud and DevOps: Kubernetes, Docker, Containerization, Terraform, Infrastructure as Code (IaC), CI/CD, Cloudflare, AWS, Google Cloud Platform (GCP), Serverless, Linux
Web and Databases: React, Next.js, Node.js, PostgreSQL, Redis, MongoDB
Hardware: Embedded Systems, ATMEL, ARM, PCB Design, IMU Sensors
